

Hey Man

Have your feet gotten back to normal Yet? I am at the training in the north and We have set up the hydro 4 different times and we have gotten as much as 175 watts out of them. They work great. We had 16 small fluorescent lights and 1 (57 watt) fan on high going at the same time. I used 2x2.5 sq mm wire and we had 360 meters of wire. We also tried the lights we used Ley ton ku and they would not work. We did an amp test to see what was wrong and the igniter uses up to .8 amps to fire. I went to buy an electronic ignited light and it fires on .05 amps. I will buy more of these to send with the units.I will send pictures when I get more time and a real internet connection.

Blessings

Matt
